

# Solar Home Ventilator

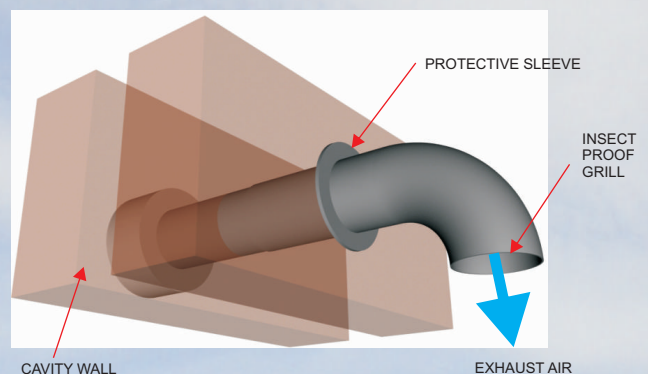

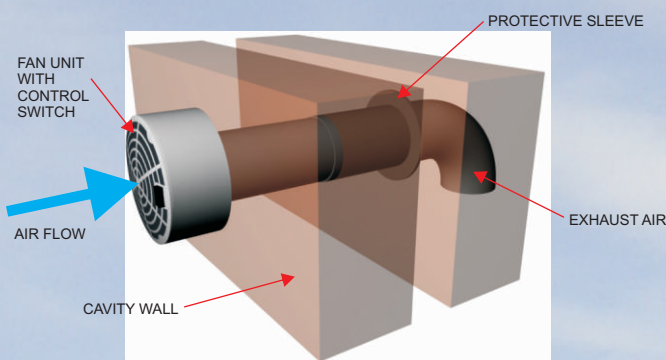

The Solar Home Ventilator is an innovative new product from Solar Source Ltd ideally suited for second homes / holiday homes where background ventilation is desirable during vacant periods when the mains power may be switched of.

Inadequate ventilation in vacant properties can lead to musty smells in the rooms, mould growth and in some cases exacerbated damp problems. The Solar Home Ventilator provides carbon free background ventilation during the day.

The Solar Home Ventilator is directly solar driven (there is no battery storage so batteries do not need to be replaced). The system can either be wall mounted (as illustrated) or roof mounted via the rafters. A optional mounting bracket is available for the PV panel to obtain optimum orientation where roof space is not available.

#### FAN SPECIFICATION:

MOTOR: 12V OR 24V  
SPEED: 3200 RPM  
POWER: 2.6W  
OPERATING LIFE: 50,000 HOURS (MIN)

Solar Source Ltd,  
Unit P5 Parkway,  
Capital Business Park,  
Wentlog,  
Cardiff CF3 2PU.
