

# PV Module Mounting System

The Solar Source Ltd **PV Module Mounting System** provides an aesthetic, robust and durable support structure for mounting framed PV modules on a range of building conditions.

Whether new-build or retro-fit, the system is suitable for the following situations:

- over-tile mounting
- over-slate mounting
- mounting on insulated panel roof systems
- pitched roof or flat roof compatible
- over-facade mounting or as a rain-screen

The precision engineered system provides mountings that can be individually adjusted for height to allow for uneven surfaces. The system will accept a wide range of framed PV modules and these can be mounted either vertically or horizontally.

Options include alternative fixing clamps for un-framed PV laminates, a range of brackets for specific substructure conditions and the option of powder coating to match the building colour scheme.

All components are manufactured from extruded aluminium or stainless steel. All components are covered by a 10-year limited warranty against defective materials and workmanship.

The system can be supplied as part of a bespoke PV installation or in kit form.

Please contact Solar Source Ltd for a quotation.
